Summary

Final-year CS student at VIT Bhopal (CGPA 8.47/10) with hands-on full-stack development across the MERN stack and real AI integrations. Built a **nutrition platform with AI-powered food photo recognition** and multiple full-stack applications with authentication, database design, and API integration. Looking for SDE / full-stack roles where I can ship production code from day one.

Education

B.Tech in Computer Science and Engineering

VIT Bhopal University, Bhopal

Expected 2026

CGPA: 8.47 / 10

Technical Skills

Languages: Python, JavaScript, TypeScript, C++, Java

Frontend: React, Next.js, HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express.js, FastAPI, REST APIs, Mongoose, JWT, bcrypt

Databases: MongoDB, MySQL

AI & Tools: OpenRouter, Google Gemini API, Cloudinary, Git, GitHub Actions

Projects

MacroLens Vision AI [\[Code\]](#)

MERN • MongoDB • JWT • OpenRouter Vision

- Full-stack fitness and nutrition platform — meal logging, 1,014-food Indian nutrition database, workout tracking, and calorie-burn estimation.
- Designed a **serving-aware nutrition engine**: every food stores structured serving metadata (unit, grams, default), and the API computes calories/macros from the selected serving weight instead of generic unit conversion.
- Integrated **image-based food recognition** via a vision-capable model through **OpenRouter** (model-agnostic gateway): users upload meal photos, the backend validates image type/size, enforces a strict JSON schema, and validates returned nutrition before logging.
- Implemented **JWT authentication (bcrypt)**, MongoDB **text-index search** with regex fallback, daily-totals **aggregation pipelines**, and ownership-checked log edits/deletes.

Pal-AI [\[Code\]](#)

Next.js • OpenRouter • Node.js • MongoDB

- AI companion platform routing **frontier LLMs through OpenRouter**, enabling provider-switchable responses from a single config change — no backend rewrites.
- Persistent multi-turn memory: sessions and messages stored in MongoDB and injected as context, with token-aware **context windowing and summarization** for long conversations.
- Secure backend: **JWT authentication, rate limiting, error handling**, and input guardrails on all chat routes.

DocDispatch [\[Code\]](#)

React • Tailwind CSS

- Role-based **healthcare portal** (providers and patients): appointment workflows, notifications, dashboards, and fully responsive interfaces.
- Accessibility-first: semantic HTML, **ARIA attributes**, keyboard navigation and focus management — audited for screen-reader and keyboard-only users.
- Built a reusable component library (auth context, modals, tables, stat cards) to keep multiple screens consistent.

Achievements & Certifications

- Earned multiple **AWS Cloud Digital Badges** demonstrating proficiency across core cloud services.
- Certified in [Computer Networking](#) (Google) and [MERN Full Stack](#) (Ethnus).
